**FOR THE PURPOSES OF THIS NEWSLETTER, THE FOLLOWING DEFINITIONS ARE USED:****ACTUAL DECEASED ORGAN DONOR**

A deceased person from whom at least one organ was recovered for the purpose of transplantation.

**DONOR AFTER BRAIN DEATH**

A donor after brain death (DBD) is a deceased organ donor in whom death has been determined by neurologic criteria.

**DONOR AFTER CIRCULATORY DEATH**

A donor after circulatory death (DCD) is a deceased organ donor in whom death has been determined by circulatory and respiratory criteria.

Modified Maastricht Categories (Paris 2012) of DCD donors:

II/ Witnessed cardiac arrest (uncontrolled): Sudden unexpected irreversible cardiac arrest, with unsuccessful attempt at resuscitation by a medical team.

III/ Withdrawal of life-sustaining therapy (controlled DCD): Planned withdrawal of life-sustaining therapy with an expected cardiac arrest.

IV/ Cardiac arrest while brain dead (uncontrolled or controlled): Sudden or planned cardiac arrest after brain death diagnosis, but before organ recovery.

**UTILISED DECEASED ORGAN DONOR**

An actual donor from whom at least one organ was transplanted.

**ORGAN TRANSPLANTS**

The transfer (engraftment) of human organs from a donor to a recipient with the aim of restoring function (s) in the body.

**TOTAL TRANSPLANTS (ALL COMBINATIONS INCLUDED)**

Includes the transplantation of the corresponding organ with or without the simultaneous transplant of a different type of organ (s).

**DOUBLE-KIDNEY TX.**

One double-kidney transplant is counted as 1 transplant.

**TX. FROM LIVING DONORS**

A living donor is a living human being from whom organs have been recovered for the purpose of transplantation. A living donor has one of the following three possible relationships with the recipient:

**A – Related:** The donor is genetically and/or emotionally related to the recipient.

A1/ Genetically related: A genetic relation exists between donor and recipient (e.g. brother/sister, parent/offspring). Therefore, a certain immunological compatibility exists too.

A2/ Emotionally related: The donor is a genetically unrelated family member (e.g. spouse) of the recipient or a friend (to be considered as a family member).

**B – Unrelated:** The donor has no genetic or emotional relationship with the recipient. The relation between donor and recipient must be outlined further by a sub-specification. Immunological compatibility exists only by chance.

B1/ Paired exchange or cross-over: By a controlled programme, unrelated donor and recipient pairs exchange grafts beyond any emotional or genetic relation, with the aim of overcoming immunological restrictions.

B2/ Non-directed altruistic or anonymous: By a controlled programme, the donor can provide a graft to society which allocates this to a previously unknown recipient by defined rules.

B3/ Directed altruistic: By a controlled programme, the donor provides a graft to a recipient of the donor's choice.

**DOMINO DONOR**

Patient who undergoes organ transplantation from a deceased donor and whose organ is suitable for transplant to another transplant candidate.

**DOMINO TRANSPLANT**

A procedure in which an organ is removed from one transplant candidate and immediately transplanted into a second patient, with the first patient receiving a new organ from a deceased donor.

**HEART-LUNG TX.**

One heart-lung transplant is counted as 1 lung transplant, 1 heart transplant and 1 heart-lung transplant.

**DOUBLE-LUNG TX.**

One double-lung transplant is counted as 1 transplant.

**TOTAL NUMBER OF PATIENTS TRANSPLANTED**

The recipient of more than one organ (e.g. combined kidney-liver) is counted as one recipient.

**PAEDIATRIC**

Includes only paediatric activity (patients aged < 18 years).

**WAITING LIST**

**Example:** At 1/1/2020 there were 200 patients active on the waiting list (WL). Along the year, 100 patients are newly included on the WL (first row). In total, 300 patients have been ever active on the WL during the year (second row). Along the year, 200 patients received an organ transplant, 50 patients remained active at the end of the year (third row), 25 patients died (fourth row) and 25 patients were excluded (number not to be reported, but derived from previous figures).

Patients included on the WL for the first time in the course of 2020	100
Total number of patients ever active on the WL during 2020	300
Patients awaiting for a transplant (only active candidates) on 31/12/2020	50
Patients who died while on the WL during 2020	25

**FAMILY REFUSALS**

*Numbers of interviews to pose the option of organ donation:* Number of interviews to present families with the option of donating the organs of the deceased person.

*Number of family refusals:* Number of negative responses to donate after holding interviews with the families.

# **Letter from the Editor**

# Letter from the Editor

**Beatriz Domínguez-Gil, MD, PhD**  
**Director Organización Nacional de Trasplantes, Spain**  
**Editor of Newsletter Transplant**

Dear friends,

It is with pleasure that I introduce a new issue of the *Newsletter Transplant*, one of the most valuable tools produced by the European Committee of Organ Transplantation of the Council of Europe (CD-P-TO) in conjunction with the Spanish Organización Nacional de Trasplantes (ONT). Since 1996, this publication has allowed the CD-P-TO to share information on donation and transplantation activities in member states of the Council of Europe (CoE) – and beyond – and to present some of the projects developed by this committee, as well as other documents of relevance to the field. The *Newsletter Transplant* is in itself an opportunity to demonstrate the active contribution of the CD-P-TO to secure fundamental human rights and freedoms, as well as to increase organ availability, improve the effectiveness of transplantation systems and enhance the quality and safety of organs, tissues and cells for clinical use.

Without doubt, monitoring of practices in donation and transplantation of substances of human origin in member states is essential for the sake of transparency and international benchmarking. This is the main aim of the *Newsletter Transplant* and the reason it has become an international reference. In this new issue, the *Newsletter Transplant* provides data from more than 80 countries throughout the world for the year 2020. The information presented relates to organ donation and transplantation activities, management of the waiting lists, and transplant centres. Donation data are displayed by type of deceased donor (after neurological or circulatory determination of death, and Maastricht categories) and type of living donor (related or unrelated to the recipient, specified or unspecified). Data are also presented by age group and gender for both organ donors and recipients. Let me take this opportunity to remind you that the underlying data collection is also hosted by the Global Observatory on Organ Donation and Transplantation (<http://www.transplant-observatory.org/>), developed and maintained by the ONT by designation of the World Health Organization.

The Observatory allows users to download the data and display figures and different types of analyses online.

Information presented in the *Newsletter Transplant* is not limited to the organ field, but also includes data collected via the Eurocet platform by the Centro Nazionale di Trapianti (CNT) in Italy on the donation, procurement, processing, distribution and clinical use of tissues and cells from a significant number of countries.

2020 was a highly complex year due to the COVID-19 pandemic, which unfortunately continues to have a profound impact on all countries in terms of health, social life and economic activities. Donation and transplantation programmes across the world have also suffered during this terrible pandemic, which has imposed major obstacles to these activities. To evaluate the precise impact of the COVID-19 health crisis on transplant programmes, this issue of the *Newsletter Transplant* displays a set of figures and tables that allows easy comparisons of organ donation and transplantation activities (by transplant type) in 2020 versus 2019, the pre-pandemic year, for a significant number of countries. The figures reveal that, although to a variable extent, the transplantation activity has decreased in most countries (by 18% globally), which identifies our patients as collateral victims of the COVID-19 pandemic. The positive message is that we have been able to make our programs co-exist with COVID-19 within a very short period of time, by increasing our knowledge about testing and selection of potential donors and recipients with regard to the infection caused by SARS-CoV-2, the impact of the disease on transplant recipients, the management of transplant programmes and the way we protect and treat our patients. International co-operation has been critical to these achievements. Thanks to these efforts, along with our commitment

and continued work, we will hopefully be able to return to normal – and continue improving – in the years to come.

The CD-P-TO, through a number of initiatives, programmes and legal instruments, has over the years actively contributed to the development and implementation of quality and safety standards in the field of donation and transplantation, facilitating the exchange of knowledge between countries and institutions, securing fundamental rights and ensuring respect for the human body. I would like to remind you of the importance and usefulness of the [technical guides](#) in the fields of organs, tissues and cells that are regularly updated by ad hoc working groups. These are invaluable tools for regulators and health professionals throughout Europe and beyond. The Committee of Ministers of the CoE has recently adopted two recommendations, presented in this issue of the *Newsletter Transplant*, to recommend member states to take all necessary measures and steps to ensure that quality and safety standards in the fields of organs, tissues and cells are carried out in accordance with these two technical guides. The adoption of these recommendations by the CoE Committee of Ministers represents an acknowledgment of the important work carried out by the EDQM and the CoE in this area and provides the CD-P-TO and relevant ad hoc working groups with the legal basis to continue elaborating and updating these guides.

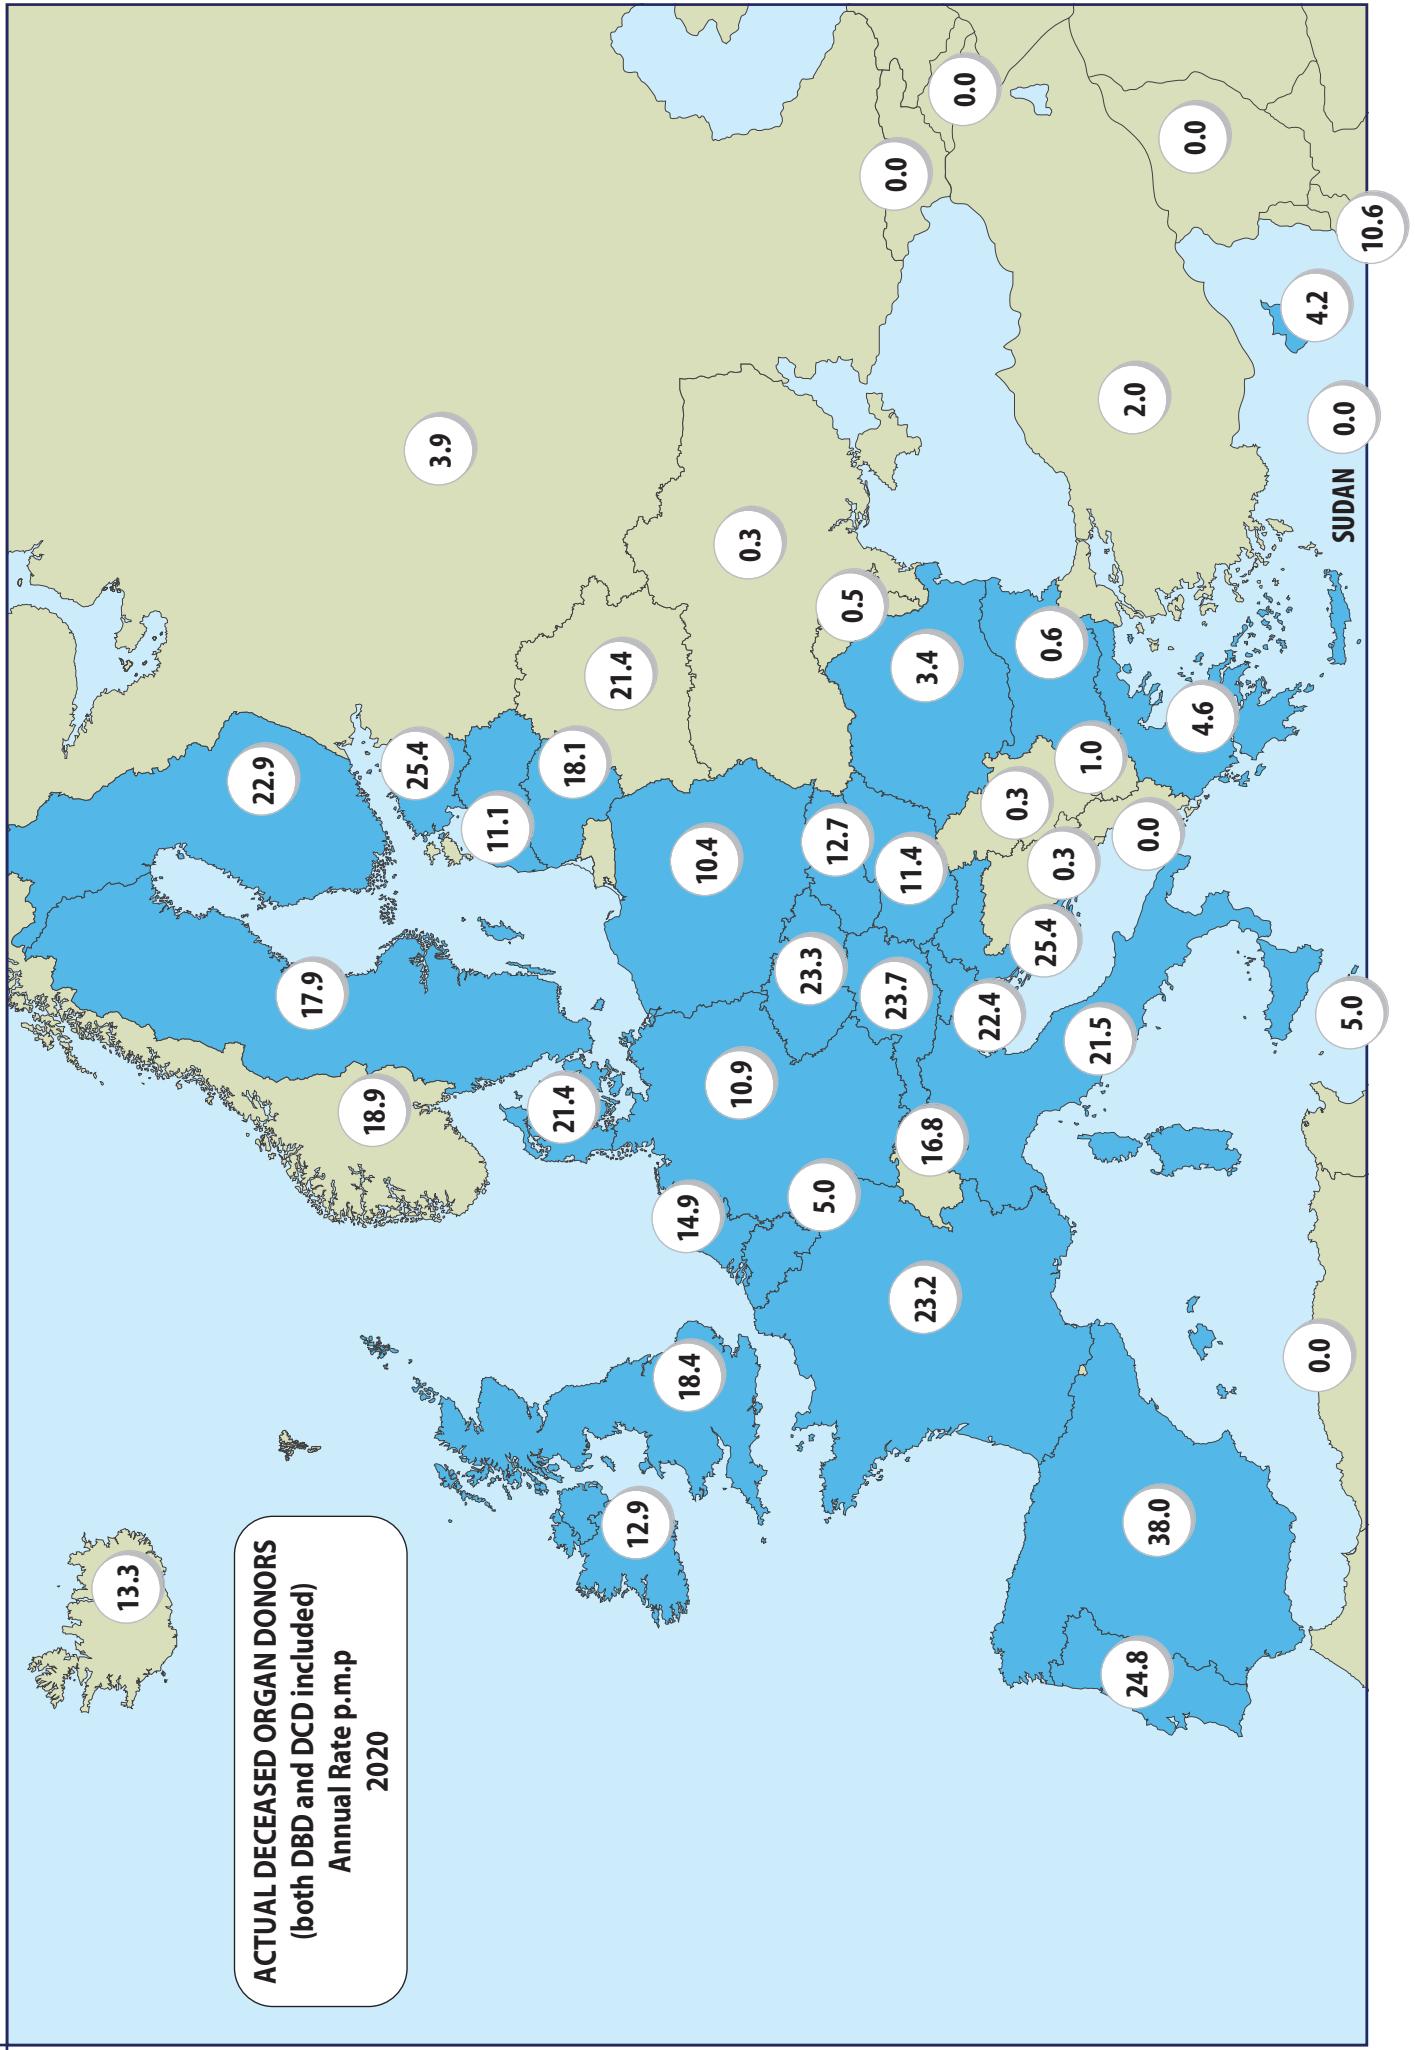

In addition, the CD-P-TO has continued to identify topics of interest and elaborate legal instruments in the field that have subsequently been adopted by the Committee of Ministers of the CoE. These documents have profoundly impacted national legislation, ethical frameworks, strategic plans on organisational aspects of donation and transplantation, and professional practices, supporting countries to address the many challenges posed by transplantation practices in a uniform manner. In this issue, we include a new recommendation to member states targeted at the protection of donors of haematopoietic progenitor cells. This recommendation provides guidance based on the most robust scientific evidence available to ensure harmonised protection measures for both related and unrelated donors. The new guidance addresses the screening and evaluation of potential donors, the short- and long-term post-donation follow-up, and the need to collect data to enable professionals in the field to learn from experience and maximise the safety of future donors.

Please allow me to finish this letter by thanking all those who make the *Newsletter Transplant* possible – members of the CD-P-TO, national focal points providing data on a regular basis and the EDQM Secretariat. Let me also thank the members of the ONT whose continuous work, commitment and enthusiasm are essential for an exercise that every year showcases the outcomes of the efforts undertaken all over the world in the fascinating field of transplantation.

## Glossary (Tissues)

### A

**Adipose tissue:** loose connective tissue, composed of adipocytes and stromal vascular fraction, which serves as energy storage and endocrine organ.

**Amniotic membrane:** the innermost layer of the placenta consisting of a thick basement membrane and an avascular stromal matrix.

**Autologous:** refers to tissues or cells removed from and applied in the same individual.

### B

**Blood vessels:** part of the circulatory system that transport blood throughout the body. They include arteries (ducts transporting blood from the heart to the periphery) and veins (ducts transporting blood from the periphery to the heart).

### C

**Cornea:** the transparent anterior part of the outer fibrous coat of the eye. A collagenous tissue bounded by an outer stratified epithelium and an inner monolayer of endothelial cells. The major refractive component of the eye.

**Craniectomy:** the surgical removal of a portion of the skull.

### D

**Distribution:** the transportation and delivery of tissues and cells intended for human application to other tissue establishments or the organisation responsible for human application in the EU. It does not include the issuing of tissues and cells for immediate transplantation.

**Donation:** donating human tissues or cells intended for human applications. One donation may include more units of the same tissue.

### E

**Export:** the transportation and delivery of tissues and cells intended for human application to a tissue establishment or an organisation responsible for human application outside the EU (third country).

### H

**Heart valve:** one of the four structures within the heart that prevent backflow of blood by opening and closing with each heartbeat. They include two semi-lunar valves (aortic and pulmonary), the mitral (or bicuspid) valve, and the tricuspid valve. They permit blood flow in only one direction.

### I

**Import:** the act of bringing tissues or cells into a EU Member State from a country outside the EU (third country) for the purpose of human application, further processing or storage.

### M

**Musculoskeletal:** tissues that are part of the skeleton and muscular system, including muscles, bones, cartilage, tendons and ligaments, which function in the support and movement of the body.

### N

**Number of tissues distributed:** number of tissue transported and delivered for human application.

**Number of tissues processed:** number of tissues that were declared suitable for human application after having undergone the required operations (preparation, manipulation, preservation, storage and packaging).

**Number of tissue procured:** the number of donated tissue made available through the process of procurement.

**Number of recipients for each type of tissues:** the total number of patients who had at least one unit of tissues or cells applied during the year concerned in a given country.

### O

**Ocular tissue:** tissue from the eye ball such as corneal tissue, scleral tissue or limbal tissue procured from a donor for human application.

**Other tissue:** all human tissues for human application that does not have a dedicated row on the form.

### P

**Pancreas:** a large lobulated gland that in humans lies in front of the upper lumbar vertebrae and behind the stomach and is somewhat hammer-shaped and firmly attached anteriorly to the curve of the duodenum with which it communicates through one or more pancreatic ducts.

**Pancreatic islets:** preparation of a group of heterogeneous cells containing functional insulin-producing cells (beta cells) and glucagon-producing cells (alpha cells) for human application.

**Parathyroid:** endocrine glands producing and secreting parathyroid hormone.

**Placenta:** an organ that connects the developing foetus to the uterine wall to allow nutrient uptake, waste elimination and gas exchange via the mother's blood supply.

### R

**Recipient:** person to whom human tissues, cells or reproductive cells and embryos are applied.

**Retrieval or procurement:** a process by which tissues or cells are made available for banking or human application. This process includes donor identification, evaluation, obtaining consent for donation, donor maintenance and retrieval of tissues, cells or organs.

**S**

**Skin:** an allograft comprising of the epidermis and part or all of the dermis.

**T**

**Tissue:** an aggregate of cells joined together by, for example, connective structures and performing a particular function.

**Tissue donation (effective):** when tissue intended for human application is retrieved from a human body.

**Transplantation/implantation/grafting:** transfer (engraftment) of human tissues or cells from a donor to a recipient with the aim of restoring function(s) in the body.

**U**

**Unit:** a single piece of tissue or a packaging containing a defined amount of tissue ready for distribution.

## Glossary (Haematopoietic Progenitor Cells)

### A

**Allogeneic:** refers to tissues or cells removed from one individual and applied to another of the same species.

**Autologous use:** refers to tissues or cells removed from and applied in the same individual.

### B

**Banking:** processing, preservation, storage and distribution of cells for human application or other purposes, including research and training.

### C

**Collection:** any procedure for procuring a cellular therapy product regardless of technique or source (Synonym: harvest).

**Cord blood:** blood collected from placental vessels and umbilical cord blood vessels after the umbilical cord is clamped and/or severed as a source of haematopoietic progenitor cells.

**Cord blood bank:** a specific type of tissue establishment in which haematopoietic progenitor cells collected from placental and umbilical cord blood vessels are processed, cryopreserved and stored. It may also be responsible for collection, testing or distribution.

### D

**Distribution:** the transportation and delivery of tissues and cells intended for human application to other tissue establishments or the organisation responsible for human application in the EU. It does not include the issuing of tissues and cells for immediate transplantation.

**Donation:** donating human tissues or cells intended for human applications.

**Donor:** a person who is the source of cells or tissue for a cellular therapy product.

**Donor registry:** an organisation responsible for coordinating the search for hematopoietic cells from donors (including cord blood) unrelated to the potential recipient.

### H

**Haematopoietic Progenitor Cells (HPC):** primitive haematopoietic cells capable of self-renewal as well as maturation into any of the haematopoietic lineages, including committed and lineage-restricted progenitor cells, unless otherwise specified and regardless of tissue source. Also referred to as "haematopoietic stem cells".

### R

**Recipient:** person to whom human tissues, cells or reproductive cells and embryos are applied.

**Related:** existence of a genetic relationship between donor and recipient.

### S

**Search:** the process of identifying a suitable stem cell source for a patient in need of a transplant.

### T

**Transplantation:** the administration of allogeneic, autologous, or syngeneic HPC with the intent of providing transient or permanent engraftment in support of therapy of disease.

### U

**Unrelated:** where there exists no genetic relationship between donor and recipient.

# **Council of Europe Reference Documents. Year 2020**

# **Recommendation CM/Rec(2020)4<sup>1</sup> of the Committee of Ministers to member States on the quality and safety of organs for transplantation**

**(Adopted by the Committee of Ministers on 7 October 2020 at the 1385th meeting of the Ministers' Deputies)**

The Committee of Ministers, under the terms of Article 15.b of the Statute of the Council of Europe,

Considering that the aim of the Council of Europe is to achieve greater unity between its member States and that this aim may be pursued, *inter alia*, by the adoption of common action in the health field;

Having regard to its Resolution Res(78)29 on harmonisation of legislations of member States relating to removal, grafting and transplantation of human substances and the final declaration of the 3rd Conference of European Health Ministers (Paris, 16-17 November 1987);

Having regard to Articles 3, 21 and 22 of the Convention on Human Rights and Biomedicine (ETS No. 164) and Articles 3 and 4 of the Additional Protocol to the Convention on Human Rights and Biomedicine concerning the Transplantation of Organs and Tissues of Human Origin (ETS No. 186);

Having regard to the Council of Europe Convention on Action against Trafficking in Human Beings (CETS No. 197) and the Council of Europe Convention against Trafficking in Human Organs (CETS No. 216);

Recalling its recommendations to member States Rec(2001)5 on the management of organ transplant waiting lists and waiting times, Rec(2003)12 on organ donor registers, Rec(2004)19 on criteria for the authorisation of organ transplantation facilities, Rec(2005)11 on the role and training of professionals

responsible for organ donation (transplant "donor co-ordinators"), Rec(2006)15 on the background, functions and responsibilities of a National Transplant Organisation (NTO) and Rec(2006)16 on quality improvement programmes for organ donation;

Recalling its resolutions Res(78)29 on harmonisation of legislations of member States relating to removal, grafting and transplantation of human substances, CM/Res(2008)4 on adult-to-adult living donor liver transplantation, CM/Res(2013)55 on establishing procedures for the collection and dissemination of data on transplantation activities outside a domestic transplantation system, CM/Res(2013)56 on the development and optimisation of live kidney donation programmes, CM/Res(2015)10 on the role and training of critical care professionals in deceased donation, CM/Res(2015)11 on establishing harmonised national living donor registries with a view to facilitating international data sharing, CM/Res(2017)1 on principles for the selection, evaluation, donation and follow-up of the non-resident living organ donors and CM/Res(2017)2 on establishing procedures for the management of patients having received an organ transplant abroad upon return to their home country to receive follow-up care;

Having regard to 63<sup>rd</sup> World Health Assembly (WHA) Resolution WHA63.22 on human organ and tissue transplantation and the World Health Organization (WHO) guiding principles on human cell, tissue and organ transplantation, as endorsed by 63<sup>rd</sup> WHA Resolution WHA63.22, May 2010;

<sup>1</sup> When adopting this recommendation, the Permanent Representative of Germany indicated that, in accordance with Article 10.2c of the Rules of Procedure for the meetings of the Ministers' Deputies, he reserved the right of his government to comply or not with the recommendation.

Taking into account Directive 2010/53/EU of the European Parliament and of the Council of 7 July 2010 on standards of quality and safety of human organs intended for transplantation and Commission Implementing

Directive 2012/25/EU of 9 October 2012 laying down information procedures for the exchange, between member States, of human organs intended for transplantation;

Considering the importance of life-saving organ transplantation and acknowledging that clinical requirement far outweighs availability of donated organs;

Considering that the misuse of organ transplantation may endanger human life, well-being and dignity and violate the principle of justice (including equity and fairness);

Considering that, as with all material of human origin, transplanted organs carry the risk of disease transmission that should be controlled by the application of scrupulous quality and safety requirements;

Considering the importance of guidelines and standards to protect the health of living donors; Considering the importance of registries to follow up recipients and donors;

Considering the importance of training and education of healthcare professionals in the field of organ donation and transplantation to optimise care for donors and patients;

Taking into account the need for harmonisation of principles and practices in member States;

Recognising, therefore, the need to provide health authorities, transplant organisations and clinical users with uniform standards for the quality and safety of organs for transplantation;

Recognising that the Guide to the quality and safety of organs for transplantation provides professionals with the most recent advances in the field, as well as technical guidance to ensure the quality and safety of human organs, ultimately improving the rate of successful and safe organ transplantation and ensuring the protection of living donors;

Aware that the Guide published by the Council of Europe has already become the generally accepted European standard and that it is therefore appropriate to give a legal reference to this Guide;

Considering that this Guide is regularly updated by the Council of Europe European Committee on Organ Transplantation or, if necessary, a subordinate body;

Recommends that the governments of member States, having due regard to their national laws, rules and administrative provisions, take all necessary measures and steps to ensure that quality and safety standards for organ donation and transplantation are set in place in accordance with the guidelines set out in the appendix<sup>2</sup> to this recommendation;

Agrees that the Council of Europe European Committee on Organ Transplantation or, if necessary, a subordinate body, will regularly update this appendix.

---

<sup>2</sup> The appendix is available for free download at the EDQM website under the reference "Guide to the Quality and Safety of Organs for Transplantation". Any reference to this appendix should be read as referring to the most up-to-date version of this Guide.

# **Recommendation CM/Rec(2020)5<sup>1</sup> of the Committee of Ministers to member States on the quality and safety of tissues and cells for human application**

**(Adopted by the Committee of Ministers on 7 October 2020 at the 1385th meeting of the Ministers' Deputies)**

The Committee of Ministers, under the terms of Article 15.b of the Statute of the Council of Europe,

Considering that the aim of the Council of Europe is to achieve greater unity between its member States and that this aim may be pursued, *inter alia*, by the adoption of common action in the health field;

Having regard to its Resolution Res(78)29 on harmonisation of legislations of member States relating to removal, grafting and transplantation of human substances and the final declaration of the 3rd Conference of European Health Ministers (Paris, 16-17 November 1987);

Having regard to Articles 3, 21 and 22 of the Convention on Human Rights and Biomedicine (ETS No. 164) and Articles 3 and 4 of the Additional Protocol to the Convention on Human Rights and Biomedicine concerning the Transplantation of Organs and Tissues of Human Origin (ETS No. 186);

Having regard to the Council of Europe Convention on Action against Trafficking in Human Beings (CETS No. 197) and the Council of Europe Convention against Trafficking in Human Organs (CETS No. 216);

Recalling its recommendations to member States Rec(94)1 on human tissue banks, Rec(98)2 on provision of haematopoietic progenitor cells and Rec(2004)8 on autologous cord blood banks (and its Explanatory Memorandum);

Having regard to 63rd World Health Assembly (WHA) Resolution WHA63.22 on human organ and tissue transplantation and the World Health Organisation (WHO) guiding principles on human cell, tissue and organ transplantation, as endorsed by 63rd WHA Resolution WHA63.22, May 2010;

Taking into account Directive 2004/23/EC of the European Parliament and of the Council of 31 March 2004 on setting standards of quality and safety for the donation, procurement, testing, processing, preservation, storage and distribution of human tissues and cells; Commission Directive 2006/86/EC of 24 October 2006 implementing Directive 2004/23/EC of the European Parliament and of the Council as regards traceability requirements, notification of serious adverse reactions and events and certain technical requirements for the coding, processing, preservation, storage and distribution of human tissues and cells; Commission Directive 2006/17/EC of 8 February 2006 implementing Directive 2004/23/EC of the European Parliament and of the Council as regards certain technical requirements for the donation, procurement and testing of human tissues and cells; Commission Directive (EU) 2015/565 of 8 April 2015 amending Directive 2006/86/EC as regards certain technical requirements for the coding of human tissues and cells; Commission Directive (EU) 2015/566 of 8 April 2015 implementing Directive 2004/23/EC as regards the procedures for verifying the equivalent standards of quality and safety of imported tissues and cells; and Commission Directive 2012/39/EU of 26 November 2012 amending Directive 2006/17/EC as

<sup>1</sup> When adopting this recommendation, the Permanent Representative of Germany indicated that, in accordance with Article 10.2c of the Rules of Procedure for the meetings of the Ministers' Deputies, he reserved the right of his government to comply or not with the recommendation.

regards certain technical requirements for the testing of human tissues and cells;

Taking into account the Barcelona Principles on the use of human donated tissue for ocular transplantation, research and future technologies;

Considering that human tissues and cells can restore essential functions or, in some cases, save lives, but that the demand for some tissues and cells far outweighs the available supply;

Considering that human tissues and cells can be derived only from the body of a person – hence the ethical challenges associated with their use;

Considering that tissues from one deceased donor may be transplanted into as many as 100 patients and that some other tissues and cells can be provided only by living donors, as long as this procedure does not risk serious harm to the donor or endanger the donor's life;

Considering that, as with all material of human origin, human tissues and cells carry the risk of disease transmission that must be controlled by the application of scrupulous quality and safety requirements and by ensuring that comprehensive quality systems are in place;

Considering the importance of guidelines and standards to protect the health of living donors; Considering the importance of registries to follow up recipients and donors;

Considering that haematopoietic progenitor cells need specific matching between a donor and recipient requiring international co-operation;

Considering the importance of training and education of health care professionals in the field of tissue and cell donation and transplantation to optimise care for donors and patients;

Considering that some tissues and cells are used practically unaltered from the condition in which they were removed from the donor but that others are processed into products that are almost unrecognisable as bodily material;

Taking into account that the rapid development of novel processing methods and clinical applications requires well-defined quality and safety criteria on which to base regulatory requirements;

Taking into account the need for harmonisation of principles and practices in member States;

Recognising, therefore, the need to provide health authorities, transplant organisations, tissue establishments, organisations responsible for human application of tissues and cells, including clinical users, with uniform standards for the quality and safety of tissues and cells for human application;

Recognising that the Guide to the quality and safety of tissues and cells for human application provides professionals with the most recent advances in the field, as well as technical guidance to ensure the quality, safety and efficacy of tissues and cells, ultimately improving the rate of successful and safe human application and ensuring the protection of living donors;

Aware that the Guide published by the Council of Europe has already become the generally accepted European standard and that it is therefore appropriate to give legal reference to this Guide;

Considering that this Guide is regularly updated by the Council of Europe European Committee on Organ Transplantation or, if necessary, a subordinate body;

Recommends that the governments of member States, having due regard to their national laws, rules and administrative provisions, take all necessary measures and steps to ensure that quality and safety standards for the donation, preparation and clinical application of tissues and cells are carried out in accordance with the guidelines set out in the appendix<sup>2</sup> to this recommendation.

Agrees that the Council of Europe European Committee on Organ Transplantation or, if necessary, a subordinate body, will regularly update this appendix.

<sup>2</sup> The appendix is available for free download at the EDQM website under the reference "Guide to the Quality and Safety of Organs for Transplantation". Any reference to this appendix should be read as referring to the most up-to-date version of this Guide.

# **Recommendation CM/Rec(2020)6<sup>1</sup> of the Committee of Ministers to member States on establishing harmonised measures for the protection of haematopoietic progenitor cell donors**

**(Adopted by the Committee of Ministers on 7 October 2020 at the 1385th meeting of the Ministers' Deputies)**

The Committee of Ministers, under the terms of Article 15.b of the Statute of the Council of Europe,

Considering that the aim of the Council of Europe is to achieve greater unity between its member States and that this aim may be pursued, *inter alia*, by the adoption of common action in the health field;

Having regard to Resolution Res(78)29 on harmonisation of legislations of member States relating to removal, grafting and transplantation of human substances and the final text of the 3rd Conference of European Health Ministers (Paris, 16-17 November 1987);

Having regard to the Convention on Human Rights and Biomedicine (ETS No. 164), in particular to Articles 19, 20 and 21 thereof, and its Additional Protocol concerning Transplantation of Organs and Tissues of Human Origin (ETS No. 186), in particular Chapter III – Organ and tissue removal from living persons, Article 9, and Chapter VI – Prohibition of financial gain;

Having regard to the Convention for the Protection of Individuals with regard to Automatic Processing of Personal Data (ETS No. 108, as amended by Protocol CETS No. 2232) and its Additional Protocol regarding supervisory authorities and transborder data flows (ETS No. 181);

Recalling Recommendation CM/Rec(2019)2 of the Committee of Ministers to member States on the protection of health-related data which replaces Recommendation Rec(97)5 of the Committee of Ministers to member States on the protection of medical data;

Recalling Recommendation Rec(98)2 of the Committee of Ministers to member States on provision of haematopoietic progenitor cells;

Taking into account the latest available edition of the Council of Europe Guide to the Quality and safety of tissues and cells for human application, in particular the Chapters on "Recruitment of potential donors, identification and consent" and on "Haematopoietic progenitor cells from bone marrow and peripheral blood";

Taking into account the World Health Organization Guiding Principles on Human Cell, Tissue and Organ Transplantation as endorsed by the 63rd World Health Assembly in May 2010, in Resolution WHA63.22, and in particular Guiding Principles 10 and 11, which call for health authorities to oversee that transplant programmes ensure traceability and vigilance and to monitor outcomes of both living donation and transplantation;

Taking into account Directive 2004/23/EC of the European Parliament and of the Council of 31 March 2004 on setting

<sup>1</sup> When adopting this recommendation, the Permanent Representative of Germany indicated that, in accordance with Article 10.2c of the Rules of Procedure for the meetings of the Ministers' Deputies, he reserved the right of his government to comply or not with the recommendation.

<sup>2</sup> The Protocol amending Convention No. 108 (CETS No. 223) was opened for signature on 10 October 2018 and the revised convention has yet to enter into force.

standards of quality and safety for the donation, procurement, testing, processing, preservation, storage and distribution of human tissues and cells, and Directive 2006/17/EC of 8 February 2006 implementing Directive 2004/23/EC of the European Parliament and of the Council as regards certain technical requirements for the donation, procurement and testing of human tissues and cells;

Taking into account Commission Directive 2006/86/EC of 24 October 2006 implementing Directive 2004/23/EC of the European Parliament and of the Council as regards traceability requirements, notification of serious adverse reactions and events and certain technical requirements for the coding, processing, preservation, storage and distribution of human tissues and cells, and in particular Article 5(1)(a) and Article 7;

Taking into account Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 on the protection of natural persons with regard to the processing of personal data and on the free movement of such data (General Data Protection Regulation), and in particular Article 9, paragraph 2, points (a), (h) and (i), which contain provisions permitting the processing of health data;

Considering the observation included in the Evaluation of the European Union legislation on blood, tissues and cells (SWD(2019) 376 final) Chapter 6, point iv, that there are insufficient provisions in place to protect haematopoietic progenitor cell donors;

Considering that haematopoietic progenitor cell transplantation represents one of the most widely used forms of cell therapy and haematopoietic progenitor cells are one of the most exchanged biological materials for transplantation;

Considering that the application of haematopoietic progenitor cells for the treatment of different haematological diseases has increased extensively in the past half-century in developed countries and that many low- and middle-income countries are now establishing autologous and allogeneic haematopoietic progenitor cell transplantation programmes;

Considering that all haematopoietic progenitor cell donors are living donors, either genetically related or genetically unrelated to their recipient and that, in many cases, unrelated donors are identified across national borders;

Considering that, in exceptional situations as defined in the Convention on Human Rights and Biomedicine,

in some member States, minors can become related donors;

Considering that donation of haematopoietic progenitor cells carries certain risks, which require robust legislative and operational measures to be in place to safeguard the health and rights of donors;

Considering that, to protect the health of haematopoietic progenitor cell donors, an appropriate framework should include adequate selection criteria, from both the medical and psychosocial perspective, proper informed consent, guarantee of follow-up care, as well as the collection of data on the donor's health status in the short and long term;

Considering, in particular, that the prohibition of financial gain or comparable advantage under the terms of the Convention on Human Rights and Biomedicine does not prevent compensation of living donors for loss of earnings and reimbursement of any other justifiable expenses related to the removal of organs, tissues or cells or to the related medical examinations, as well as compensation in case of undue damage (e.g. disability) resulting from the removal of organs, tissues or cells;

Recognising that, in enabling transplantation of haematopoietic progenitor cells in the interest of patients in Europe, there is a need to protect individual rights and freedoms and to prevent the commercialisation of haematopoietic progenitor cells;

Considering that eligibility criteria for related donors (adults and minors) are less stringent and established compared to eligibility criteria for unrelated donors in most of the member States;

Considering that few member States have taken action to ensure insurance coverage of related donors at the same level as unrelated donors, especially when the related donor is a non-resident;

Considering that the technique for the collection of haematopoietic progenitor cells is the same irrespective of whether the donor is related or unrelated, and that the vast majority of donors need to undergo mobilisation of haematopoietic progenitor cells with growth factors (peripheral blood stem cell donation), whereas others require general anaesthesia (bone marrow donation), and thus an inherent risk of complications associated with the donation does exist and potential donors should be duly informed;

Considering that the requirements for the follow-up of haematopoietic progenitor cell donors and the

registration of data also differ significantly between member States, and that donor outcome data for both related and unrelated haematopoietic progenitor cell donors (adults and minors), including their health status and short-, medium- and long-term complications (e.g. malignancies, autoimmune disorders, thromboembolic disorders), should be collected, notified to health authorities and managed to help prevent these risks in the future;

Considering that the management of related and unrelated haematopoietic progenitor cell donors, including selection criteria and follow-up, should guarantee an equal level of donor safety and protection;

Considering that only through compilation of harmonised data on the outcome of haematopoietic progenitor cell donors (related and unrelated, adults and minors) by health authorities or other officially designated bodies will it be possible to obtain sufficient information to define and secure the proper follow-up of haematopoietic progenitor cell donors, to document prognoses (safety/morbidity) of these donors, to investigate causal relationships between pre-donation comorbidities and the incidence of complications during and after the donation process, and advise on possible preventive measures, and to inform future haematopoietic progenitor cell donors on the risks related to the donation process,

Recommends the governments of member States establish harmonised haematopoietic progenitor cell donor protection measures, which should be identical irrespective of the type of donor (related or unrelated, adult or minor), including the following:

- i. to develop recommendations for the assessment of donor medical suitability and on eligibility criteria for haematopoietic progenitor cell donation, as set out in Appendix 1 to this resolution;
- ii. to ensure that, before consent, donors (related and unrelated) receive appropriate information on the type(s) of tissues or cells to be donated, the collection procedures, the consequences and possible side-effects of donation and the purpose or final use of the donated cells to ensure a free and informed decision, including the right to withdraw consent at any time;
- iii. to ensure that no haematopoietic progenitor cell donation is carried out on a person who does not have the capacity to consent. Exceptionally, and depending on the age and the degree of maturity, a minor may become a family donor only in very

specific circumstances and provided they do not object to the donation and with the support of an advocate. The authorisation of a representative, authority or person or body provided for by law should be given specifically and in writing and with the approval of the competent body;

- iv. to ensure that donors (related and unrelated, adults and minors) having donated haematopoietic progenitor cells are offered both appropriate psychological support in the event of post-donation difficulties, and medical care, including, short- and long-term follow-up that takes into account the actual health status and possible complications related to donation;
- v. to set up procedures and methods for the collection of a minimum set of data on all haematopoietic progenitor cell donors (related and unrelated, adults and minors; peripheral blood stem cells and bone marrow) as specified in Appendix 2;
- vi. to ensure that haematopoietic progenitor cell donors (related and unrelated) receive financial compensation for loss of earnings and reimbursement of any justifiable expenses associated with the donation and related medical examinations, as well as in the event of undue damage as a direct result of the donation;

Agrees that the Council of Europe European Committee on Organ Transplantation or, if necessary, a subordinate body, may revise the appendices of this recommendation in the future in keeping with developments in the field.

**Appendix 1 to Recommendation CM/Rec(2020)6  
of the Committee of Ministers to member States  
Recommendations for the medical suitability  
assessment and eligibility criteria for  
haematopoietic progenitor cell donors**

The European Committee on Organ Transplantation (CD-P-TO) of the Council of Europe, using as a scientific basis the Council of Europe Guide to the quality and safety of tissues and cells for human application, has prepared these recommendations to guide the medical suitability assessment and eligibility criteria for haematopoietic progenitor cell donors (adults and, when applicable, minors):

1. during the recruitment/registration of related and unrelated haematopoietic progenitor cell donors, certain diseases and risk behaviours that pose a

risk to the donor or the potential recipient should be identified through a dedicated questionnaire checking for:

- a. malignancy;
  - b. cardiovascular disease;
  - c. any chronic disease (immune-mediated, allergic, thrombo-embolic disease, etc.);
  - d. risk of infectious diseases related to behaviour;
  - e. inherited genetic disease;
2. during the selection stage for related and unrelated haematopoietic progenitor cell donors, potential contraindications for one of the two collection methods should be identified; information about potential transmissible diseases and any relevant issue should be provided to the transplant centre through:
- a. history/questionnaire, updating the information from the previous stage, specifically with regard to:
    - i. the risk of infectious diseases (e.g. risk behaviour, trips, planned invasive procedures);
    - ii. any planned medical procedure;
    - iii. serious psychosocial or psychiatric disease with impact on the capacity to undergo a donation procedure;
    - iv. medication;
    - v. non-prescription drug use;
    - vi. height and weight;
    - vii. blood pressure;
    - viii. pregnancy or pregnancy planning and breastfeeding;
  - b. blood tests for infectious disease markers (depending on national laws and requirements [e.g. HIV, HBV, HCV, HTLV, syphilis, cytomegalovirus]);
3. prior to HLA typing (related donors), in order to save time and disappointment and before

concluding that the related donor is the best match, information on all aspects highlighted above should be obtained to identify any contraindication to donation and consent to donation should be confirmed;

4. donor work-up should include:
  - a. a full record of the donor's history, looking for any signs of undiagnosed diseases (including emerging diseases);
  - b. complete physical examination;
  - c. psychological evaluation by a trained professional (if appropriate);
  - d. laboratory tests:
    - i. infectious disease markers;
    - ii. full blood count;
    - iii. ABO and Rh typing;
    - iv. biochemistry;
    - v. chest X-ray (if appropriate);
    - vi. electrocardiogram (if appropriate).

**Appendix 2 to Recommendation CM/Rec (2020)6  
of the Committee of Ministers to member States  
Recommendation for the collection of minimum  
data on all haematopoietic progenitor cell donors  
and donations**

With the aim of facilitating harmonised data collection for haematopoietic progenitor cell donors and donations (related and unrelated; adult and minor; peripheral haematopoietic progenitor cells and bone marrow) and to ensure that all donors are offered the same medical care after donation, including follow-up according to professional standards that takes into account their actual health status and possible complications related to donation, this appendix includes the minimum data set that should be collected from each donor:

1. donor information:
  - a. identification number;
  - b. date of birth/age;

- c. gender;
  - d. country of residence;
2. donation data:
- a. date of donation;
  - b. donation centre;
  - c. type of donor:
    - i. related (HLA-identical/haplo-identical)/unrelated;
    - ii. peripheral haematopoietic progenitor cell;
    - iii. bone marrow;
    - iv. unstimulated leukocytes;
  - d. number of haematopoietic progenitor cell collection procedures in the donation cycle concerned;
  - e. total number of procedures during the donor's lifetime;
  - f. type of mobilising agents, doses and administration route, if appropriate;
3. post-donation/follow-up data:
- a. short-term follow-up;
    - i. severe adverse reactions during and in the first 30 days after donation, related to:
      - a). the collection procedure;
      - b). haematopoietic progenitor cell mobilisation;
  - b. long-term follow-up

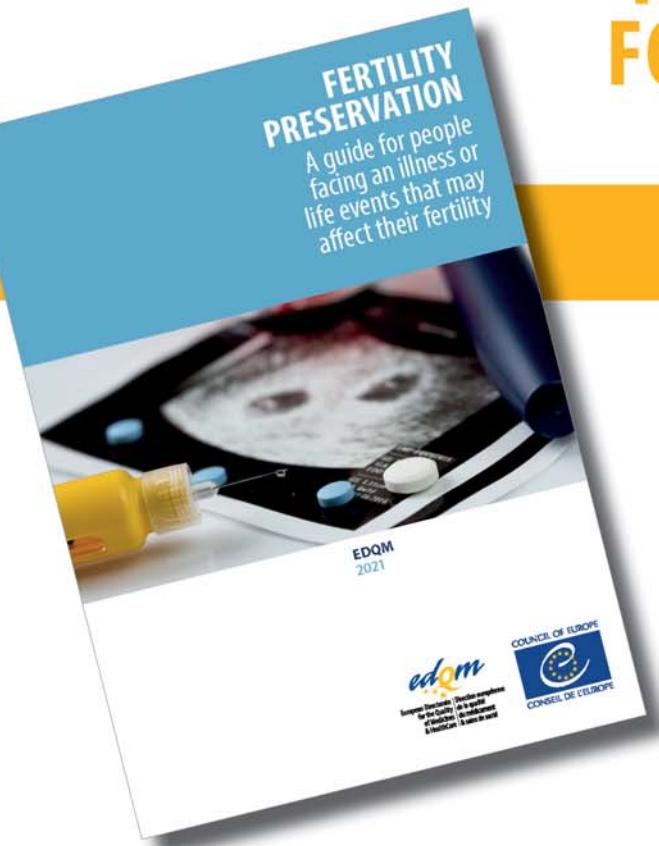

The first long-term follow-up report should be submitted one year after the last haematopoietic progenitor cell donation and, subsequently, every two years up to 10 years after the last donation procedure<sup>3</sup>. These follow-up reports should contain the following:

- i. information about newly diagnosed diseases covering at a minimum:
  - a). severe or systemic autoimmune disorders;
  - b). malignancies (haematological, oncological);
- ii. new long-term medication prescriptions;
- iii. survival and, if applicable, cause of death.

<sup>3</sup> According to the recommendations of the European Society for Blood and Marrow Transplantation (EBMT), available at [https://www.ebmt.org/sites/default/files/migration\\_legacy\\_files/document/Donor%20Outcome%20Manual.pdf](https://www.ebmt.org/sites/default/files/migration_legacy_files/document/Donor%20Outcome%20Manual.pdf) [last accessed 25 June 2020]
